## WALL INSTALLATION

### Hygienic Cladding Cleaning Guide

#### Weekly Manual Cleaning Regime

Wash the hygienic cladding sheets using a soft cloth and water or diluted soap/detergent.

Important: Only use a soft cloth and DO NOT use an abrasive cleaner wire wool or pad.

#### Pressure Cleaning

Pressure cleaning with hot water may be carried out with the nozzle a minimum of 600mm/2ft away from the surface area.

Important: Never exceed the maximum temperature of 60oC and ALWAYS check and adhere to the specific hygienic cladding brand technical specification sheets.

#### Stubborn Stains

Any heavily soiled areas/stains can be cleaned with a non abrasive cleaner such as Cif.

#### Dusty Environments

To reduce static charge after cleaning, apply an antistatic solution to all surfaces when dry if required.

Important: failure to maintain certain branded hygienic cladding products in accordance with the technical specification of said product can affect the performance of the sheet and thus warranty.

#### Helpful Tips

There is not better nor prove effective remedy to eliminate bacteria than that of an impeccable cleaning regime.
